

Cybersecurity App - Reports

Panels	Description
Weekly Audit Report	• This report mirrors the approved audit checklist found in SharePoint and uses tables which are easier to render to pdf • The panels are listed in order of the Windows events followed by Linux events and Cisco events • All of these events should mirror the other dashboards found in the Cybersecurity app, use those specific OS-based dashboards for additional details Note: This is just a summary view and an artifact that can be exported to PDF. It's not intended to use for drilldowns, but rather gives a broad and consolidated view of your weekly auditable events.
SROs	• Security-relevant objects are defined as sensitive paths within the Windows operating system • Example: winevt, /var/log, system32, security registry keys, etc. • The paths that were chosen were based off common threats to an operating system and directories that • Changes to these objects could cause damage when modified • If there are specific file paths within your program that you would like added to the panel, the panel can be updated
Export PDF	 • Using the Export button at the top of the report, select Export PDF

- A new tab will open and Splunk will start generating a PDF for that weekly report

The screenshot shows the Splunk Enterprise interface with the 'Weekly Audit Report' dashboard. The dashboard is titled 'Weekly Audit Report' and has a 'Last 7 days' filter. It displays four panels under the 'Windows' section. The top-left panel shows 'Event 517/1102/1104 - The audit log has been cleared or full/stopped' with 'No results found.' The top-right panel shows 'Event 528/4624 - Successful logon' with a table of users and their counts. The bottom-left panel shows 'Event 529/4625 - Logon failure: Unknown user name or bad password' with a table of users and their counts. The bottom-right panel shows 'Event 531/4625 - Logon failure: Account disabled' with 'No results found.'

PDF Output

- The output will be similar to the screenshot below
- If no results were found for that specific panel or event, you will see the message indicating 'No results found.'
- The PDF should generate faster compared to the Executive Summary dashboards
 - Tables are faster to generate than graphics or visualizations
- I would recommend using this artifact as part of your weekly audit process.
- If you are using the 'AuditBOE.ps1' script to start your weekly audits, you can save this to your 'Splunk' folder that is created

Windows

Event 517/1102/1104 - The audit log has been cleared or full/stopped
No results found.

Event 528/4624 - Successful logon

user	count
sweaters	72
mvelton_sec	30
jflynn	10
watson	2

Event 529/4625 - Logon failure: Unknown user name or bad password

user	count
watson	2

Event 531/4625 - Logon failure: Account disabled
No results found.

Event 535/4625 - Logon failure: Expired password
No matching events found.

Event 539/4625 - Logon failure: Account locked out
No results found.

Event 4616 - System time change
