

Panel	Description																																																																													
Actions Taken of Privileged Objects - Details	• This event generates large amounts of logs. • This event is typically generated by admins and service accounts performing numerous actions, including updates, installing software, running programs with large amount of I/O operations. • Actions on privileged objects may show signs of indicators of compromise (IoC). • There are patterns that you can look for that may indicate suspicious behavior, but this is best done by filtering the data using the search bars within the panel. • This panel will continue to expand to other panels as event correlation is added in later updates to the dashboard. Notable events: • Strings of characters or odd-looking Object_Names • Malware can attempt to mask itself under a legitimate object type, but the name could be an indicator of a malicious process • High numbers of events tied to non-service accounts and especially on non-privileged user accounts • Suspicious account names (non-baseline) • Repeated attempts to modify the same object
